PROBLEM STATEMENT

Note: This is just a sample for your understanding. Change it as per your details. Don't change the header.

Problem Statement

Manual medical image analysis causes diagnostic delays

Problem Statement Expansion

Manual medical image analysis creates significant diagnostic bottlenecks, leading to delayed treatments and increased clinician burnout. By the start of 2026, healthcare providers are increasingly adopting AI to automate anomaly detection, ensuring faster, more accurate results that improve patient survival rates and efficiency.

How it manifests for the user or client

Manual medical image analysis creates significant diagnostic bottlenecks, leading to delayed treatments and increased clinician burnout. By the start of 2026, healthcare providers are increasingly adopting AI to automate anomaly detection, ensuring faster, more accurate results that improve patient survival rates and efficiency.

How it impacts the user or client

In 2026, diagnostic delays cause irreversible health decline and massive financial loss for patients. For clinicians, the resulting workload triggers 80%+ burnout rates and fatigue-driven errors, compromising safety and forcing healthcare systems into a reactive, high-cost cycle of crisis management.

Project Details

Project Name (Try to keep it under 5 words)

Describe your project (Try to keep under 100 words)

Demographic it Impacts

User Persona Mindset

1. Build for “real humans, not hypothetical users”
2. Start with people who face “real friction in everyday life”
3. Think beyond comfort and convenience — focus on “need and necessity”
4. Assume “constraints”, not perfect conditions
5. Design for “simplicity, empathy, and dignity”
6. Aim for solutions that “actually change someone’s day-to-day reality”

DEREK

- 28 years old
- Salguerro
- Designer
- \$45,000 - \$139,999

USER PERSONA 1

ABOUT THE USER

Derek is a confident graphic designer who runs his own freelance business. He works with writers, photographers, and other creative professionals to deliver captivating designs to clients. Derek dreams of growing his solopreneur venture into a design agency.

PROBLEMS

- Presenting his work to a wide audience
- Expressing his ideas clearly
- Keeping his business relevant and balancing business relevant

CHALLENGES

- Following up with clients on feedback
- Billing clients on time
- Managing his notes, clippings, and resources

ABOUT THE USER

- Down-to-earth
- Easygoing
- Inspiring
- Problem solver

GOALS AND NEEDS

- To express his creativity and vision to others
- To develop a successful freelance business
- To find inspiration from the world around him

SAMPLE for reference, please replace with your project details

Our Solution

For which Persona you are providing the solution for

What do you plan to build ?

Who it is for ?

What problem does it addresses ?

How it would work in the real world ?

What impact would create ?

Why it is worth building ?

Our Solution Continue

USE of

SAMPLE for reference, please replace with how your proposed solution leverages AI

Artificial Intelligence

AI can automate repetitive tasks, saving time and resources, AI reduces human error in data analysis and decision-making. AI drives innovation by enabling new technologies and applications.

Challenges and Risks

- Challenge/risk 1.
- Challenge/Risk 2.
- Challenge / Risk 3 and so on
Add more as required.

Technical Request for Facilitated Datasets

Finalists should categorize their request using the following parameters:

Specification of Required Data

Data Type: (e.g., Anonymized clinical imagery, Indic-language speech samples, high-res geospatial layers, or structured IoT sensor logs).

Volume & Depth: The minimum required rows, file count, or historical duration (e.g., "5 years of crop yield data across 10 districts").

Granularity: The level of detail needed (e.g., "District-level vs. Village-level" or "Daily vs. Monthly" updates).

The "Ask" vs. "Leveraged" Mapping

What you have: List the open-source data (Bhashini, OGD, etc.) you have already successfully integrated.

What you need: Identify the specific "Facilitated Dataset" from AI4India that acts as the missing piece for model accuracy or localized impact.

Technical Justification

Provide a clear rationale for how this facilitated data will improve the prototype:

Accuracy/Validation: "We need the AI4India health records to validate our model trained on synthetic data."

Feature Engineering: "Real-time traffic feed is required to move from static route optimization to dynamic smart-city scaling."

Edge-Case Handling: "Specific regional dialect data is needed to ensure the educational bot works for the underserved unserved populations."

Environment & Security Requirements

Access Method: Request preference for data delivery (e.g., Secure API, direct download, or sandbox environment access on AIKosh).

Security Compliance: Confirm that your team has an environment ready to handle sensitive/facilitated data according to DPDP (Data Protection) standards.

Anticipated Results

Absolutely the last set of information to add!

Really Great Company

Which Persona benefits the most and estimated advantage (quantified)

Work increases for which persona and estimated increase

Solution scalability - operationally and technically

THANK YOU

for your time and attention
